

# SEARCH REQUEST FORM

Scientific and Technical Information Center

Requester's Full Name: Alycia Berman Examiner #: 76457 Date: 7/30/01  
Art Unit: 1129 Phone Number 308-4638 Serial Number: 09/701710  
Mail Box and Bldg/Room Location: CM1-3019 Results Format Preferred (circle): PAPER DISK E-MAIL  
3D12

If more than one search is submitted, please prioritize searches in order of need.

\*\*\*\*\*

Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc, if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.

Title of Invention: See attached  
Inventors (please provide full names): See attached

Earliest Priority Filing Date: 6/3/98

\*For Sequence Searches Only\* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Please do a structure search of catechin of claim 8.  
Also search compounds of claim 6 <sup>or</sup> extract of theaceae (claim 10) or Camellia sinensis (claim 11) or green tea in a topical or cosmetic or dermatologic or cream or lotion or salve.

Thanks

I

AB A hair coloring compn., and a method for using the compn. in which a natural plant-derived chem. of the formula I is employed as a coupler-modifier in a compn. contg. a primary intermediate and a customary coupler. The novel coupler-modifiers produce a compn. which is more physiol. suitable for use in hair colorings than the prior art compns. and allows for the prepn. of compns. which produce highly stable colorings over a broad range shades and tones. A hair coloring soln. contained **green tea** polyphenols 1.0, p-aminophenol 1.6, resorcinol 1.6, 50% sodium hydroxide 1.2, anhyd. sodium sulfite 0.4, ammonium lauryl sulfate (28% aq. soln.) 10.0, ethanol 10.0, 26% ammonia 10.0 and water 64.2 g. Shortly before application 10 g of this hair coloring compn. is mixed with 10 mL hydrogen peroxide soln. (6%), and the mixt. is allowed to react for 30 min at 30.degree. in blond human hair. The hair is then rinsed with water and dried to obtain a light olive coloration.

AB The anti-inflammatory activity of aq. oolong tea ext. was tested. The formation of edema caused in rats paws by injection of carrageenin was effectively depressed by soaking the rat paws in hot oolong tea ext. It gives 60% inhibition at the dose of 75 ppm of oolong tea ext. Oolong tea ext. showed higher antiinflammatory activity than those of green and black tea exts. The active components were found to be catechins and oolong tea tannin (oxidative products of catechin in oolong tea) fractionated from aq. oolong tea ext. By oral administration of oolong tea ext., carrageenin-induced inflammation was also inhibited, but the anti-inflammatory activity by oral administration was lower than by the soaking treatment. The inflammatory activity of percutaneous absorbed oolong tea polyphenols was assumed to be due, at least partly, to the inhibition of prostaglandin biosynthesis in rat tissue injected with carrageenin.

IC ICM A61K007-00

ICS A61K007-48; A61K035-78

AB DE 19962369 A UPAB: 20010822

NOVELTY - Active ingredient composition (A) comprises (i) an extract of a  
plant of the order Theales and/or **catechins** (I) and/or (I)  
gallate esters and (ii) at least one ascorbyl compound (II), preferably  
water soluble.

DETAILED DESCRIPTION - The extract is particularly derived from a  
plant of the family Theaceae, especially the tea plants *Camellia sinensis*,  
*C. assamica*, *C. taliensis*, *C. irrawadiensis* or their hybrids with e.g. *C.*  
*japonica*.

ACTIVITY - Dermatological.

MECHANISM OF ACTION - (A) improves, or restores, the barrier function  
and hydration of the stratum corneum, in particular the physico-chemical  
properties of the lamellae of intracellular lipids.

USE - (A) is used in cosmetic and dermatological compositions,  
particularly those in which (i) is a **catechin**-containing plant  
extract (specifically of green tea). The compositions are used for care  
and protection of the skin, especially sensitive, dry, aged or otherwise  
altered skin, e.g. protection against toxic and allergic reactions, sun,  
wind, ageing etc.

ADVANTAGE - (II) act as stabilizers for (I), which normally have very  
poor storage stability. (A) improves, or restores, the barrier function  
and hydration of the stratum corneum, in particular the physico-chemical  
properties of the lamellae of intracellular lipids.

TECH UPTX: 20010822

TECHNOLOGY FOCUS - PHARMACEUTICALS - Preferred materials: (I) are (+) or (-) forms of **catechin** or **epicatechin**, or (-)-**epigallocatechin**, all optionally as their gallates. (I) is particularly Vitamin C or its derivative, e.g. ascorbyl acetate or palmitate, or magnesium ascorbyl phosphate. Preferred compositions: These contain 0.0001-20, best 0.01-1, wt.% (i) and 0.001-10, best 0.1-2, wt.% (I). The compositions may also include usual sunscreens, preservatives, surfactants, antioxidants etc., and may be formulated as solutions, emulsions, gels, etc. or in transdermal therapeutic systems.

NOVELTY - **Catechins** and their cholanolic acid (literally: bile acid) esters as well as plant extracts containing them are used to prevent, treat and care for dry skin and to improve skin condition by stimulating sphingolipid synthesis or strengthening the lipid barrier.

DETAILED DESCRIPTION - Use of **catechins** and their cholanolic acid (literally: bile acid) esters, including aqueous and organic plant extracts containing them, e.g. from leaves of Theaceae, especially *Camellia sinensis* (green tea), or their typical components, e.g. polyphenols, **catechins**, caffeine, vitamins, sugars, minerals, amino acids, lipids), for: (a) the prevention, treatment and/or care of dry skin or (b) the stimulation of the sphingolipid synthesis in or the strengthening of the lipid barrier of human skin is new.

USE - In cosmetic and dermatological skin preparations.

ADVANTAGE - The **catechin** compounds and their extracts are cheaper and more effective than conventionally used intercellular lipid mixtures, especially ceramides. Also, they are physiologically acceptable and have a rapid and long-lasting action.
